

UNISOURCE A FULL SERVICE EMS PROVIDER

HOW CAN WE HELP YOUR PRODUCTS SUCCEED?

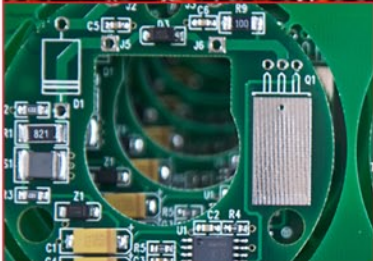

WIRE HARNESS/WIRE KITS

Harness manufacturing is a niche service that many ECM companies shy away from. We start by stripping down the harness into the most economical “manufacturable” subassemblies so we can take advantage of economies of scale up to the point of final assembly. Each harness is tested with customized automated testing equipment. Harnesses are then packaged and as required, labeled with UL traceability marks.

CABLE ASSEMBLIES

Long a core piece of our business, today we have over 1500 active cable assemblies built in quantities from 1 to over 7,500 annually. The key to our success in meeting the broad needs of these unique assemblies is that each and every assembly has a custom set of build instructions written for it. The instructions are a dynamic document that receives continual input from assemblers and quality inspectors alike to refine the build process.

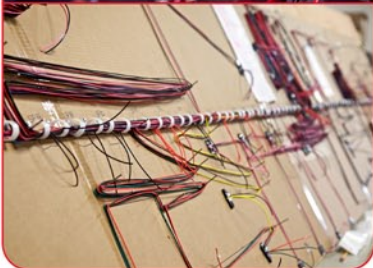

PRINTED CIRCUIT BOARD ASSEMBLY

20+ years of circuit board assembly has provided us with the knowledge to meet the needs of our diverse customers. Be it thru-hole, SMT or mixed technology, we have the capability to provide high mix/low volume (under 10,000 units), Rohs compliant assembly, as well as traditional assembly line production. Our buyers know where to find the “tough to find,” obsolete parts and will develop a supply chain plan to meet your specific board need.

TURNKEY ELECTRO/MECHANICAL ASSEMBLY

We provide complete upper level turnkey assembly allowing our customers to single source the product. Taking advantage of our harness, cable assembly and PCBA lines, we then integrate into upper level turnkey assemblies. From simple alarm assemblies to user interface panels and complete electro/mechanical assemblies, Unisource has the experience needed to deliver. FMH, our parent company, is a UL 508a panel shop, providing panel build and design services, further enhancing our scope of service.

PROTOTYPE/QUICK TURN CELL

While still in the design phase, customers often ask us to create cables or harnesses for their prototype units with as little as 24 hours turn time. In response, we created a dedicated cell to provide quick turn and one off assembly. This cell, with its dedicated personnel, has full build authority and purchasing discretion to streamline of the build without disrupting our main production lines.

INDUSTRIES SERVED:

Transportation
Military
Semiconductor
Fluid Management
Material Handling
Consumer Electronics
Medical
